SUMMARY

Ambitious and **detail-oriented Artificial Intelligence student** with strong expertise in **Machine Learning, Deep Learning, and Backend Development**. Skilled in **Python, Flask, SQL, and NLP**, with practical experience in **data preprocessing, feature engineering, and model performance optimization**. Proven ability to **improve model accuracy by 15%** and **reduce training time by 30%** during internship projects. Recognized for achieving **top national ranks in Machine Learning hackathons**, demonstrating innovation, problem solving, and teamwork. Passionate about building **AI-driven solutions** that enhance decision-making and drive measurable impact.

EDUCATION

G.H. Raisoni College of Engineering and Management

Bachelor of Technology in Artificial Intelligence; CGPA: 7.11/10.0

Nagpur, India

2023 – 2027 (Expected)

Defence Services Academy College, Shahapur

Bhandara, India

Higher Secondary Education (HSC); Percentage: 56.67%

INTERNSHIP

Navodita Infotech | Machine Learning Intern | *Python (Flask), PostgreSQL, scikit-learn, Pandas, NumPy*

- Built and optimized **Machine Learning models** using **Python** (pandas, NumPy), **achieving ~92% accuracy** on test datasets.
- Implemented **data preprocessing** and **feature engineering** techniques, reducing model training time by **30%**.
- Conducted **comparative evaluation of regression and classification algorithms**, leading to a **15% improvement in model**.
- Documented methodologies and insights for an internship report, collaborating with interns and mentors.

PROJECTS

Counting the number of cancer cells in microscope-observed images

- **Preprocessed** the images - **normalizing** and **centre-cropping**
- Used the **deep-learning** architecture - **Resnet-34** to learn the image-to-count mapping
- Modified the architecture to have one output neuron, and used the **RMSE** Loss function to train the model
- Achieved RMSE Loss of **0.98**, achieving **runners-up position** ([Link](#))

Critical Feature Analysis for Backorder Determination using ML

Objective was to find the features that are vital in determining whether a Product will go on Backorder or not and thus finding their Critical Threshold Values.

- **Random Forest Model** was trained on a **highly imbalanced dataset** having **16,00,000 records**. The model was able to get a **cross validated recall score of 0.83 without Oversampling the Minority class**.
- Used Feature Importance attribute of Random Forest and extracted insights on most influential Features.

TECHNICAL SKILLS

Languages: Python, Java, C, C++, Node.JS, SQL

Databases: MYSQL, PostgreSQL

Developer Tools: Git, GitHub, Google Colab

Areas of Interest: Artificial Intelligence, Machine Learning, Backend Development, NLP

ACHIEVEMENTS & EXTRACURRICULARS

- Achieved State 2nd Rank in Vidyarthi Vigyan Manthan (VVM), India's largest digital science talent search competition.
- Attained top 2% rank on the Machine Learning Hackathon leaderboard hosted by Doceree.
- Among top 20 teams out of 2400 registered participants in Bayer Integrated "Digital Label" Hackathon
- 3rd Position in Pan India Business Plan Formation event organized by Roundtable, DTU out of 992 participants.
